

Pool distribution

General provision

Winnings in Totup are paid out from the prize pool, which is formed by the players' bets.

The fee for bet is charged separately from the bet into the prize Fund.

For each coupon, four pools are formed on four betting tables:

- Wooden
- Bronze
- Silver
- Gold

The bet plays only in one pool on the table where it was made.

The rules of distribution of winnings are the same for all types of coupons and betting tables.

The distribution of the prize fund is carried out in two stages:

- 1st stage - the determination of winning bets.
- 2nd stage - calculation of winnings for each bet.

Determination of winning bets

The determination of winning bets is carried out in two stages:

- 1st stage - ranking of bets.
- 2nd stage - selection of winning bets.

Ranking of bets

After evaluating the accuracy of prediction, all bets are ranked according to the following criteria:

Criterion No 1. Evaluation of the accuracy of the prediction.

The bets will be arranged in descending order of points.

Criterion No 2. The bet value.

If points for accuracy are equal, the bets are ranked in descending order of the bet size.

Criterion No 3. The time of the bet.

When the bet sizes are equal, the bets are ranked from earlier to later.

A bet made before is more priority for a win than the bet made later, if they have equal points for accuracy and equal bet sizes.

Selection of winning bets

After the bets are ranked, the winning bets are determined based on the following rules:

Rule No 1. Bets with an accuracy of prediction equal 100 points are always winning.

Rule No 2. The number of winning bets is:

- 50% of the total number of bets if the number of bets is even-numbered and
- 50% of the total number of bets minus one, if the number of bets is not even-numbered.

Rule No 1 is more important than Rule No 2

Calculation of winnings

After the winning bets are determined, the winnings are calculated according to the following rules:

Rule No 1. The prize pool is distributed in full.

Rule No 2. The size of the winnings is proportional to the points of the accuracy of the forecast.

Rule No 3. The size of the winnings is proportional to the values of the bets.

Rule No 4. The minimum winning ratio is 1.3 (excluding commission), except for the case specified in Rule No 5.

Rule No 5. In the case where more than 50% of the bets have been assessed for forecast accuracy with 100 points, the winnings are distributed among all the bets that scored 100 points for accuracy, in proportion to the size of the bet.

Refund stakes and commission fees

Refund stakes and commission fees are refunded in the following cases:

1. Only one bet was made in the pool.
2. All bets received an estimate for the accuracy of the forecast of 100 points.
3. Coupon was cancelled in connection with the cancellation of the event.
4. The pool draw was cancelled in connection with the fraud detection.

Briefly about main

Totup is a new betting system where players place bets into a prize pool that is fully distributed among the players.

The rules of the pool distribution are such that 50% of the bets win.

Bets (forecasts) are estimated for accuracy in the range from 0 to 100 points.

Winnings are proportional to points for the accuracy of the forecast and the value of the stake.

Bets are made by means a coupon. For each coupon, 3 pools are formed: bronze, silver and gold, depending on the size of the bet.

There is an opportunity after a simplified registration to make free bets using the virtual currency "tots".
